Chokka Block Measuring Instructions

Does the standard block suit your pop-top? Take one quick measurement to check.

Standard block size

Standard Chokka Blocks are **58 mm** long.

How to measure

1. Raise the roof as normal and look along the sill plate where the block sits.
2. Place the block (or a ruler) with its back pushed **hard against the sill plate**.
3. Find the **first weather seal witness mark** on the sill. This is the line left where the roof seal sits when the roof is down.
4. Measure in millimetres from the back of the block (at the sill plate) to that witness mark.
5. If your measurement is **58 mm**, the standard block suits your van. If it is shorter or longer, you may need a different size.

Need a different size?

Please email your sizing to info@chokkablock.com.au if you need another size Chokka Block. Include:

- Your measurement in mm
- Your caravan make, model and year (for example Jayco Expanda 2018)
- A photo showing the block against the sill plate and the witness mark

This information will help your fellow pop-top owners. Every size we receive helps us build a fitting list so the next owner of the same van gets the right block first time.

The Chokka Block is a guide only and is not a structural support. It helps guide an already misaligned roof into place so your caravan's own roof clips can secure it. CHOKKA BLOCK is not affiliated with Jayco or any caravan manufacturer.
